Text: Calculus, Fifth Edition, James Stewart, Brooks Cole, 2003

Course Content: The course will cover most of the material in chapters 7 through 12. The topics covered include logarithmic and exponential functions, inverse trigonometric functions, methods of integration, improper integrals, infinite series of constants, and Taylor Series for functions.

Homework/Testing: Homework assignments for every class lecture are on the syllabus. In addition there are homework assignments that are to be done on-line. Instructions for logging on to a computer and completing the on-line assignments will be provided on a separate handout. The on-line homework will be graded. The on-line score will be scaled and the scaled score will be worth a total of 30 points. There will be 4 fifty-minute tests and a comprehensive final exam. Each test will be worth 50 points and the final exam will be worth 100 points. The lowest test grade will be dropped unless the lowest grade is made on the final exam. If the lowest grade is made on the final, the final will count as 50 points in your total score instead of 100. **There will be no makeup tests!** The final exam must be taken. If any other exam is not taken, it will be the one that is dropped. Dates for the exams are Wednesday, January 25; Wednesday, February 15; Wednesday, March 8; and Friday, April 14. The date and room for the final exam will be announced later in the term.
